MP5 Mags

A Community Production

Description

Welcome!

Included in the file pack are 10 & 30rd MP5 patterned magazines.

The 10rd version has been tested with a 10rd Beretta magazine spring, and the 30rd version has been tested with an assortment of 30-33rd springs from different platforms. We recommend Glock 33rd Springs, but others will work.

These mags have been tested in many platforms as well:

AP5

KF5

H&K

PTR

AR9s

Testers who used traditional H&K style systems reported difficulty loading the mag with a closed bolt.

It is recommended that you use a dry lubricant or light oil in the mag for smoothness.

Try to cycle the follower a few times with a suitable tool to break it in.

As with any 3D printed part, minor filing and modification may be required.

Settings

All parts are saved in their suggested orientation.

Print with no fewer than 5 walls @ ~.2mm layer height in PLA+. Higher wall counts will help with longevity.

It is very important that your printer is calibrated to acceptable levels before printing any magazine. Magazines are extremely picky and you can expect malfunctions and stoppages from incorrect print settings.
